

## **But I go to a doctor. Why I need ARAM?**

- A. Many studies including one from RAND Institute (2004 and then 2006 study), New England Journal of Medicine March 26, 2006 study have shown the same results.

New York State Government HMO Report Card for 2004 and then for 2005 shows that even patients with health insurance that go for care to providers do not get the care they should be getting in over 50% of cases. Data shown has similar outcomes for most healthplans and New York State reflects the National averages (All this shown as bar charts – Summary at our site).

I have never seen odds so negatively stacked against anyone. One in two chance of getting care that may lead to lifelong disability. It is worse than drunk driving and even worse than Russian Roulette where the chances of suffering a loss are only 50/50!

ARAM will inform you deficiencies in your care and then help you fix those deficiencies so that you can live a happy and healthy life for a long time to come.
