

What is Health Management?

ARAM focuses on health as much as on the disease. In many cases that have a chronic medical problem like diabetes, hypertension, coronary artery disease etc there is often missed component of preventive care causing unrelated life threatening problems like breast, prostate or colon cancer. We at ARAM always consider the whole patient as a single entity. We not only help manage 'better control of the disease condition' but also 'help prevent the medical conditions that can be prevented.'
